Subject: [IML2020] Project grades
Date: 2 July 2020 at 00:09
To: pullelys@ethz.ch

Dear student,

Please disregard the previous email with the project grades. As many of you noticed, there was a mixup in our database. We apologize sincerely for the confusion.

You have achieved the following scores (public + private) in the IML 2020 projects:

Task	Public score	Private score	Overall % of hard baseline
1a	16.6223687	-----	100
1b	4.909057396	-----	100
2	0.779457388	0.774461893	100
3	0.901727862	0.88700565	100
4	0.698630137	0.697113934	100

Overall percentage 100.00
Grade 6.0

Public and private scores for your tasks can be checked on our server. The grading has been done by setting results of easy, medium and hard baselines as corresponding to grades 4, 5 and 6 respectively. For results inbetween, we linearly interpolate between the two baselines to determine the final score per task. The score for each task is weighed as 80% public and 20% private (if there is a private score; otherwise 100% public score counts). To calculate the final grade, we weight the tasks as described on the course page.

If you did not submit the report and the code for a task - the submission for the task was rejected. You have time till 13.07.2020 to petition the results on the ground that the server results do not match the result in the above table. Please check them.

We published the description of hard baselines as well as private baseline scores on Piazza.

Best regards,
IML Team
